

## Financial Systems

# Banking deposits: performance improves after a brief pause

Saidé A. Salazar / Sirenia Vázquez / Mariana A. Torán

In July 2014 the nominal annual growth rate of traditional bank deposits (demand + term) was 12.5%. With it traditional deposits recover momentum after posting two consecutive months of cuts in growth (April 12.8%, May 11.9%, 10.1% June). The improvement in this variable's performance is closely linked to the recovery in economic activity and employment in recent months. In particular, the Global Economic Activity Indicator (IGAE) has reported an improvement in its annual growth rate, from 0.4% in April, to 1.7% in May and 2.7% in June.<sup>1</sup> Meanwhile, the growth in the number of permanent and temporary workers insured by the IMSS has also accelerated in recent months, from 3.0% in April, to 3.2% in May, 3.5% in June and 3.7% in July. In terms of its components, in July 2014, demand deposits accounted for 9.9 percentage points (pp) of the growth in traditional deposits, while term deposits contributed 2.6pp.

## Demand deposits: momentum returns

In July 2014 nominal annual growth rate of demand bank deposits was 16.8%, marking a 2.9pp recovery over the previous month (April 17.1%, May 16.4%, June 13.9%). This recovery was principally driven by deposits from firms, which accounted for 7.0pp of the growth rate; it was followed by deposits from individuals, contributing 4.6pp; the non-financial public sector with 4.1pp; and non-banking financial intermediaries (NBFI) with 0.9pp.<sup>2</sup> The average nominal annual growth rate of demand deposits in the first seven months of the year was 15.3%, 7.2pp above the results for the same period the year before. Thus, the downward trend in this segment has been reversed, moving towards its recovery in the second half of this year.

## Term deposits: the recovery is back on track

In July 2014 the nominal annual growth rate of term deposits was 6.3%, representing a 1.6pp increase over the month before. This recovery has been principally driven by deposits from individuals, who accounted for 5.0pp of the growth rate; they were followed by the NBFI segment with 1.7pp and the non-financial public sector with 0.4pp. Corporate deposits reported a nominal annual growth rate of -1.2%, contributing -0.4pp to the total growth rate of term deposits. The nominal annual percentage variation of term deposits in the first seven months of the year was 3.6%, 2.8pp below the same period in 2013. As with demand deposits, term deposits recovered after two months of consecutive slides in their growth. Term deposits are expected to consolidate their growth in the second half of the year, as long as the improvements in economic activity and employment continue, driven by external demand and by a more efficient use of public sector spending.

## Debt mutual funds: growth accelerates for the first time this year

In July 2014 the nominal annual growth rate of the balance of securities held by debt mutual funds was 7.5%, 3.1pp above the figures for June, and the highest figure so far this year (January 4.2%, February 5.0%, March 5.0%, April 3.5% and May 4.1%). Debt mutual fund balances had not posted growth rates above 5.0% since November 2013. The component which contributed most to the growth rate was the holding of government debt, with 8.3pp, followed by private sector paper (0.1 pp) and mutual funds stocks (0.1 pp). By contrast, ownership of banking securities fell,

<sup>1</sup> Original series.

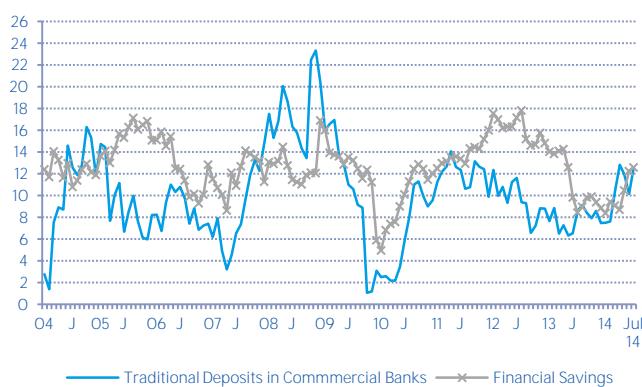

<sup>2</sup> Data on deposits by segments (individuals, firms, non-financial public sector and NBFI) is supplied by the central bank (Bank of Mexico or Banxico) publication Commercial Banking Resources and Obligations. The amount when added up may therefore differ slightly from the total, which is also supplied by Banxico in its Monetary Aggregates information.

posting a 1.0pp negative contribution to the growth rate. The average annual growth rate in the first seven months of the year was 4.8%, 10.8pp below the result posted for the same period last year.

## Financial Savings (FS): three months of double-digit growth in a row

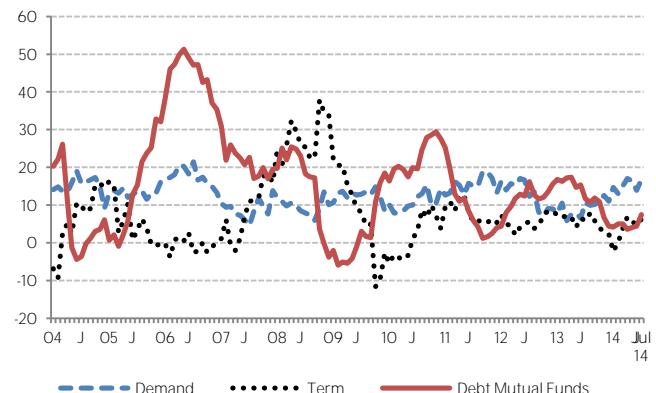

The nominal annual growth rate of FS in July 2014 was 12.6%. With it financial savings has enjoyed three consecutive months of double-digit growth (May 10.5%, June 12.3%). The average nominal annual growth rate over the first seven months of the year was 10.1%, 2.3pp below the same period in 2013. FS as a category includes all savings instruments, whether banking or non-banking.
