

BANCOS CENTRALES

El BCE está dispuesto a aplicar todas las medidas

María Martínez / Sonsoles Castillo

- El BCE ha reiterado su intención de aplicar todas sus medidas de política monetaria
- El BCE parece estar más seguro de la recuperación económica

Tal como se había previsto, en la reunión de política monetaria celebrada el pasado jueves no ha habido cambios en la postura de política monetaria del BCE, ya que el banco central ha mantenido el tipo de interés de referencia sin cambios en el 0,05 % y no ha adoptado nuevas medidas de liquidez no convencionales. El Sr. Draghi recalcó su compromiso de llevar a cabo los programas de compra de activos (APP) hasta que se consiga una evolución sostenida de la inflación, reiterando que el Consejo de gobierno (CG) seguirá centrado en "la plena aplicación de nuestras medidas de política monetaria." Por lo que respecta a las perspectivas de inflación, el CG seguirá supervisando de cerca los riesgos a medio plazo; por otra parte, se ha subrayado que los riesgos para las perspectivas económicas son ahora más equilibrados, aunque siguen siendo a la baja.

En cuanto a las perspectivas económicas, el Sr. Draghi pareció estar más seguro de la recuperación, señalando que la economía de la eurozona ha cobrado impulso desde finales de 2014 y que el banco central espera que la recuperación económica "se amplíe y consolide gradualmente", aunque subrayó que esta "recuperación está supeditada a la plena aplicación de la política monetaria."

La declaración del BCE incluyó una referencia explícita a la evaluación de la inflación, ya que el CG (cuando evalúe los APP) se centrará en las "tendencias de la inflación, revisando resultados imprevistos en la inflación medida en ambas direcciones si se consideran transitorios y no tienen consecuencias para las perspectivas a medio plazo de la estabilidad de los precios." Asimismo, el Sr. Draghi señaló que el banco central será flexible a la hora de medir la inflación e indicó que "no realizará valoraciones o estimaciones en base a observaciones puntuales," añadiendo que "no están supeditadas a un indicador específico; utilizaremos una variedad de indicadores acerca de las expectativas de inflación."

En la rueda de prensa, la atención se centró en preguntas sobre los APP. El Sr. Draghi resaltó que se "pretende" (recalcando esta palabra como una señal clara) que el programa esté en vigor hasta finales de septiembre de 2016. Además, va por buen camino y está teniendo un impacto en la actividad económica. En respuesta a una pregunta sobre si el BCE está experimentando problemas a la hora de encontrar suficientes activos para alcanzar su objetivo mensual de 60.000 millones de euros de compras de deuda -ya que en algunas jurisdicciones una creciente proporción de deuda europea tiene un rendimiento inferior a -0,2 %, el umbral establecido por el BCE para adquirir bonos-, el Sr. Draghi restó importancia a estas preocupaciones acerca de una posible escasez de bonos, indicando que son "un tanto exageradas" ya que el banco central no ve ningún problema. Sin embargo, señaló que los APP podrían ser lo suficientemente flexibles¹ si las

¹ El jueves, el BCE añadió nuevas agencias a la lista de las que reúnen los requisitos para vender sus bonos en sus programas APP. ([véase](#))

circunstancias lo exigen, si bien dejó claro que la reducción del tipo de la facilidad de depósito no es una opción. En cuanto a las especulaciones sobre una conclusión del programa antes de lo esperado, el Sr. Draghi expresó su sorpresa ante este debate, ya que el programa se puso en marcha hace tan solo un mes. Añadió en diversas ocasiones que “es prematuro” cambiar un programa que funciona bien.

En lo que se refiere a Grecia, al ser preguntado por la posibilidad de una prórroga de la provisión de liquidez de emergencia (ELA) para los bancos griegos, el Sr. Draghi señaló que seguirá aprobando la ELA mientras los bancos griegos sean solventes y dispongan de garantías adecuadas, pero observó que la pelota está ahora en el tejado del gobierno griego. Para reconsiderar la restauración de la exención para volver a admitir bonos griegos como colateral para operaciones monetarias, aclaró que debe haber “unas perspectivas creíbles de una conclusión con éxito” de las reformas económicas en Grecia. Asimismo, añadió que cambiar los “*hair cuts*” a la deuda griega se mencionaron durante la reunión de política monetaria, aunque no se debatieron. Señaló que el CG retomará esta cuestión “a su debido tiempo”.

Como esperábamos, el BCE se mantuvo firme acerca del plan de compra de activos, ya que se encuentra en las primeras fases de su aplicación, cuando se espera que el efecto de las señales (crítico) sea mayor, y considerando los persistentes riesgos a la baja tanto para el crecimiento como para la inflación. Además, sería prematuro dar una señal en otras direcciones.

DESTACADO: sobre el formato del comunicado del BCE:

El aparente formato “control de cambios” que se emplea a continuación tiene por objeto facilitar el seguimiento de cambios del comunicado respecto a la anterior reunión del BCE. En negro aparece la parte del comunicado que se mantiene sin cambios. En azul y subrayado las novedades de la última reunión y en rojo y tachado, el texto que no aparece en el nuevo comunicado

Mario Draghi, President of the ECB,
Nicosia, 5 March 2015

~~Ladies and gentlemen, the Vítor Constâncio, Vice-President and I are very pleased to welcome you to our press conference, here, in Nicosia. I would like to thank Governor Georgiadis for her kind hospitality and to express our special gratitude to her staff for the excellent organisation of today's meeting of the Governing Council.~~ the ECB, 15 April 2015

Based on our regular economic and monetary analyses, and in line with our forward guidance, we decided to keep the **key ECB interest rates** unchanged.

As regards **non-standard monetary policy measures**, ~~the focus is now on implementation.~~

~~Following up on our decisions of 22 January 2015, we will, on 9 March 2015, start we started purchasing euro-denominated public sector securities in the secondary market. We will also continue purchasing as part of our expanded asset-backed securities and covered bonds purchase programme, which we started last year. As previously stated, the combined monthly also comprises purchases of public and private sector securities will amount to €60 billion. They asset-backed securities and covered bonds. Purchases are intended to be carried out run until the end of September 2016 and will, in any case, be conducted until we see a sustained adjustment in the path of inflation which that is consistent with our aim of achieving inflation rates below, but close to, 2% over the medium term. Further information on certain implementation aspects of the public sector purchase programme will be released at 3.30 p.m. CET on the ECB's website When carrying out its assessment, the Governing Council will follow its monetary policy strategy and concentrate on trends in inflation, looking through unexpected outcomes in measured inflation in either direction if judged to be transient and to have no implication for the medium-term outlook for price stability.~~

~~We have already seen a significant number of positive effects from these monetary policy decisions. The implementation of our asset purchase programmes is proceeding smoothly, with volumes in line with the announced figure of €60 billion of securities per month. In addition, there is clear evidence that the monetary policy measures we have put in place are effective. Financial market conditions and the cost of external finance for the private economy sector have eased further, also following our previous monetary policy measures. In particular, considerably over the past months and borrowing conditions for firms and households have improved considerably. Moreover, money and credit dynamics have been firming notably, with a pick-up in the demand for credit.~~

~~The substantial additional easing of our monetary policy stance supports and reinforces the emergence of more favourable developments for the euro area economy. In an environment of improving business and consumer sentiment, the transmission of our measures to the real economy will strengthen, contributing to a further improvement in the outlook for economic growth and a reduction in economic slack. Thereby, our measures will contribute to a Looking ahead, our focus will be on the full implementation of our monetary policy measures. Through these measures, we will contribute to a further improvement in the economic outlook, a reduction in economic slack and a recovery in money and credit growth. Together, such developments will lead to a sustained return of inflation towards a level below, but close to, 2% over the medium term and will underpin the firm anchoring of medium to long-term inflation expectations.~~

Let me now explain our assessment in greater detail, starting with the **economic analysis**. According to Eurostat's flash estimate, real GDP in the euro area rose by 0.3%, quarter on quarter, in the last quarter of 2014, which was somewhat higher than previously expected. The latest economic data and, particularly, survey evidence available up to February point to some further improvements in economic activity at the beginning of this year. Domestic demand, especially private consumption, continued to be the main driver behind the ongoing recovery. The latest economic indicators, including survey data up to March, suggest that the euro area economy has gained further momentum since

~~the end of 2014. Looking ahead, we expect the economic recovery to broaden and strengthen gradually. The low level of the price of oil should continue to support households' real disposable income and corporate profitability. Domestic demand should also be further supported by our monetary policy measures leading to ongoing improvements in financial conditions, as well as by the progress made in with fiscal consolidation and structural reforms. Moreover, the lower level of the price of oil should continue to support households' real disposable income and corporate profitability and, therefore, private consumption and investment. Furthermore, demand for euro area exports should benefit from improvements in price competitiveness and from the global recovery.~~ However, the euro area recovery is likely to continue to be dampened by the necessary balance sheet adjustments in various a number of sectors and the rather slow sluggish pace of implementation of structural reforms.

~~This assessment is also broadly reflected in the March 2015 ECB staff macroeconomic projections for the euro area, which foresee annual real GDP increasing by 1.5% in 2015, 1.9% in 2016 and 2.1% in 2017. Compared with the December 2014 Eurosystem staff macroeconomic projections, the projections for real GDP growth in 2015 and 2016 have been revised upwards, reflecting the favourable impact of lower oil prices, the weaker effective exchange rate of the euro and While remaining on the downside, the risks surrounding the economic outlook for the euro area have become more balanced on account of the recent monetary policy decisions, the fall in oil prices and the lower euro exchange rate.~~

~~According to Eurostat's flash estimate, euro area annual HICP inflation was -0.1% in March 2015, up from -0.3% in February and -0.6% in January. This pattern largely reflects an increase in oil prices in euro terms since mid-January. On the basis of the impact of the ECB's recent monetary policy measures.~~

~~The risks surrounding the economic outlook for the euro area remain on the downside but have diminished following recent monetary policy decisions and the fall in oil prices.~~

~~According to Eurostat's flash estimate, euro area annual HICP inflation was -0.3 % in February 2015, after -0.6% in January. The negative outcomes largely reflect the impact of the significant fall in information available and current oil prices since July 2014. On the basis of current information and prevailing futures prices for oil, annual HICP inflation is expected to remain very low or still negative in the months ahead. Supported by the favourable impact of our recent monetary policy measures on aggregate demand, the impact of the lower euro exchange rate and the assumption of base effects and somewhat higher oil prices in the years ahead, inflation rates are expected to start increasing gradually increase later in 2015 and to pick up further during 2016 and 2017.~~

~~This assessment is also broadly reflected in the March 2015 ECB staff macroeconomic projections for the euro area, which foresee annual HICP inflation at 0.0% in 2015, 1.5% in 2016 and 1.8% in 2017. In comparison with the December 2014 Eurosystem staff macroeconomic projections, the inflation projection for 2015 has been revised downwards, mainly reflecting the fall in oil prices. In contrast, the inflation projection for 2016 has been revised slightly upwards, also reflecting the expected impact of our recent monetary policy measures.~~

The Governing Council will continue to monitor closely the risks to the outlook for price developments over the medium term. In this context, we will focus in particular on the pass-through of our monetary policy measures, as well as on geopolitical developments, and exchange rate and energy price developments.

~~When discussing the economic outlook and the new projections, the Governing Council acknowledged that the staff projections are conditional on the full implementation of all our policy measures. Moreover, the March staff projections extend the horizon to 2017. In this context, the Governing Council again stressed that the degree of forecast uncertainty tends to increase with the length of the projection horizon.~~

Turning to the monetary analysis, recent data confirm the gradual increase in underlying growth in broad money (M3). The annual growth rate of M3 increased to 4.40% in February 2015, up from 3.7% in January 2015, up from 3.8% in December 2014. Annual growth in M3 continues to be supported by its most liquid components, with the narrow monetary aggregate M1 growing at an annual rate of 9.01% in January/February.

~~Loan dynamics also gradually improved further. The annual rate of change of loans to non-financial corporations (adjusted for loan sales and securitisation) was -0.9% in January 2015, after -1.1% in December 2014 4.4% in February, after -0.9% in January, continuing its gradual recovery from a trough of -3.2% in February 2014. The three-month cumulated net lending flows were positive in January for the second consecutive month, compared with sizeable net redemptions still recorded a year ago. In this respect, the April 2015 bank lending survey confirms that improvements in lending conditions support a further recovery in loan growth, in particular for firms.~~ Despite these improvements, the dynamics of loans to non-financial corporations remain subdued and continue to reflect the lagged relationship with the business cycle, credit risk, credit supply factors and the ongoing adjustment of financial and non-financial sector balance

sheets. The annual growth rate of loans to households (adjusted for loan sales and securitisation) increased further to 1.0.9% in January February 2015, after 0.89% in December 2014. Our recent January. The monetary policy measures we have put in place should support a further improvement improvements both in borrowing costs for firms and households and in credit flows across the euro area.

To sum up, a cross-check of the outcome of the economic analysis with the signals coming from the monetary analysis confirms the appropriateness of need to implement firmly the Governing Council's recent decisions. The determined full implementation of all our monetary policy measures will provide the necessary support to the euro area recovery and bring inflation rates towards levels below, but close to, 2% in the medium term.

Monetary policy is focused on maintaining price stability over the medium term and its accommodative stance contributes to supporting economic activity. However, in order to reap the full benefits from our monetary policy measures, other policy areas need to must contribute decisively. Given continued high structural unemployment and low potential output growth in the euro area, at the ongoing cyclical recovery along the lines of the March ECB staff projections is no grounds for complacency should be supported by effective supply-side measures. In particular, in order to increase investment, boost job creation and raise productivity, both the decisive implementation of product and labour market reforms and actions to improve the business environment for firms need to gain momentum in several countries. It is crucial that structural A swift and effective implementation of these reforms be implemented swiftly, credibly and effectively as this will not only increase the future lead to higher sustainable growth in the euro area but will also raise expectations of permanently higher incomes and encourage both households to expand consumption and firms to increase investment today, bringing forward thus reinforcing the current economic recovery. Fiscal policies should support the economic recovery while remaining in compliance with the Stability and Growth Pact. Full and consistent implementation of the Stability and Growth Pact is key for confidence in our fiscal framework. In view of the necessity to step up structural reform efforts in a number of countries, it is also important that the macroeconomic imbalance procedure is implemented effectively in order to address the excessive imbalances as identified in individual Member States
