

## Market Comment

## Rhetoric-driven swings in trade deal prospects dictate market movements

- During this week, financial markets fluctuated sharply with US-China trade negotiations as the key driver. The uncertainty over a US-China trade deal and disappointing IS manufacturing data have increased investor concern about the strength of two of the three recent main pillars (accommodative monetary policy is the third). However, sentiment slightly reversed after optimism about a trade deal emerged on Wednesday.
- This week saw a wild back and forth on US-China trade talk rhetoric, led mainly by self-contradictory statements from the US; while China insists that any deal must include a tariff rollback (see)
- This week's positive economic data in China was offset by weaker US economic figures, ahead of tomorrow's payrolls. China's PMI increased more than expected, and the euro zone showed a more resilient-than-expected domestic demand in 3Q19. GDP growth was confirmed at 0.2% QoQ in 3Q19 underpinned by the strength of private (0.5% from 0.2%) and public consumption, in contrast to the poor performance of investment and exports (0.4%). However, retail sales in the euro zone declined again in October (-0.6% m/m), pointing to some moderation in household consumption. However, ahead of tomorrow's payrolls, the US ISM manufacturing and services, along with ADP employment report disappointed, sparking concerns about the US economic outlook. Today's reported jobless claims were more encouraging (203K, Cons: 215K, Previous: 213K). The trade deficit decreased more than expected in October (-\$47.2, Cons: -\$48.5 billion, Previous -\$51.1 billion) as imports unexpectedly contracted more than exports. Separately, durable goods orders and factory orders showed mixed results.
- Elsewhere, Japan was the first DM country to launch a fiscal stimulus: \$121 bn (1.9% of GDP)
- Sovereign yields increased at the start of the week, underpinned by strong Chinese PMI data, but showed acute corrections, dragged by Trump signaling no rush to strike a deal, and weak US manufacturing ISM (10Y yield declined 15bps intraday), before clawing back on renewed optimism about a trade deal. However, the decline in European yields was more contained amid political noise in Germany which could lead to higher public expenditure (Change in 10Y yield since Friday +3.1bps in US, +6.7bps in Germany). Spain's risk premium remained unchanged (78bps) but Italy's widened further (+6.8bps) amid political risks.
- Risk-off mood boosted equity volatility (VIX) to October highs (18) but managed to crawl back to 15 (+3bps since last Friday) on renewed optimism about trade. Equity was shocked due to the trade concerns and weak data in the US but quickly ebbed as odds of a trade deal still remain alive.
- In FX, the USD depreciated against most currencies led by softer-than-expected US economic data (DXY -1.0%, Euro +0.8%). The GBP appreciated sharply, with the Conservative party leading the polls. EM currencies recovered this week on the back of the weak USD. Despite the turmoil in some Latam countries, the CLP appreciated (5.7%) after its Central Bank surprised markets by holding interest rates (against expectations of a cut), while positive data in Brazil led to gains in the BRL (+0.5%), offsetting the negative impact of higher US tariffs on Brazilian steel. On the other hand, trade tensions weighed on the RMB, albeit slightly.
- In commodities, oil prices increased (Brent +0.7%), driven by fresh news during today's OPEC+ meeting where deeper output-cuts were agreed to support crude prices, although this proposal needs to be confirmed this Friday.
