

Market Comment

The New Year starts with shy optimism

Financial markets began the year on a positive note, with both equity markets and yield increasing as a result of a fresh monetary stimulus announced by China and comments from US officials suggesting that the US and China could sign phase one of the agreement on January 15. A cautious tone emerged during the session, however, with DM yields showing early increases amid low trading volumes. Economic data was slightly weaker than expected, but was not the main reason behind the decline in yields. Meanwhile, geopolitical risk (US-Iran conflict) and ongoing 2020 uncertainty factors (US elections, Trump's impeachment and US-China trade talks) might have played some role in today's cautious tone.

US President Donald Trump suggested that he will sign a preliminary trade deal with China on January 15, which should pave the way for phase-two talks to commence. Nevertheless, China has not yet confirmed the signature date, and the precise terms of the phase-one deal remain unclear. Separately, the Chinese central bank has announced that it will cut the Reserve Ratio Requirement on January 6, injecting \$115 billion into the country's financial system ([see](#)).

In December, manufacturing confidence was revised upward in the US, but slightly downward in the UK. Eurozone Markit Manufacturing PMI increased more than expected (46.3; Cons: 45.9; Prev: 45.9) but still remained weak amid negative PMIs from intermediate and investment goods sectors. Moreover, US jobless claims declined on the week ending December 28 following an upward revision last month (222k; Cons: 220k; Prev: 224k).

Equity markets increased across the board, with cyclical sectors leading the way, while equity volatility inched down.

Sovereign bond yields showed early increases, ending the session declining in most DM countries (10Y UST -3.9 bps, 10Y Ger -4.0 bps) despite trade optimism. In Europe, the Italian bond continued to underperform due to political concerns. Italy's risk premium widened (+4.2 bps to 164 bps) while Spain's risk premium inched up slightly.

The USD index, which reached its six-month low this Tuesday, appreciated marginally and the JPY recovered from early losses. Nonetheless, European currencies depreciated, especially for the GBP as concerns of a no-deal Brexit at the end of 2020 persists. EM currencies generally appreciated, with LatAm currencies leading in gains.
