

Market Comment

Central banks mull over potential stimulus

- Concerns about the Covid-19 spillover effects continued to weigh on financial markets** although global central banks mull over stimuli.
- Central banks and Government pledged stimuli.** The Fed's Chairman, Joreme Powell, in a short statement said that the Covid-19 poses a risk for the economy and warned that they will use the toll to support the economy ([see](#)). The Bank of Japan increased its government bond purchases (demanded USD 4.6bn of government bonds), while Italy injected an additional €3.6b to support the economy. Whereas, the ECB's members warned against acting hastily. The ECB's Villeroy said they are monitoring the situation but monetary policy is more effective in supporting the demand, and so far, Covid-19 has weighed on supply mainly. Moreover, the media suggest the G7 finance minister will be holding a meeting tomorrow to discuss Covid-19 policy response.
- Higher-than-expected impact of the Covid-19 on activity.** In the U.S., the ISM Manufacturing PMI index slightly declined more than expected in February (50.1, consensus 50.5, previous 50.9) amid supply-chain disruptions and fragile production. The decline in February China's PMI was greater than expected, with a significant fall in China's services confidence, which sank sharply into the contraction territory: February's Non-manufacturing PMI (29.6, consensus 50.5, previous 51.1). However, the two measures of the Manufacturing PMI also contracted further. Caixin China Manufacturing PMI (40.3; Prev: 51.1; Cons: 46.0). Manufacturing PMI (35.7, consensus 45, previous 50). Meanwhile, the OECD warned that the Covid could halve global economic growth in 2020. The OECD cut its outlook for global GDP growth (to 2.4%, -0.5pp), but said global growth could drop further to 1.5% in 2020 if the virus lasts longer.
- Expectations of potential stimuli by the Central banks encouraged a rebound in equity markets. However, equity indices were volatile on the back of weak data and investor anxiety due to virus spillover effects.** Market risk measures such as the implied volatility in the equity market remained elevated after peaking on Friday ahead of Mr. Powell's statement.
- Sovereign bond yields extended declines after last week's drop with core bonds (especially the U.S.) remaining well-demanded at the expense of peripherals.** The long-term German yield remains below the -0.6% level, whereas the 10Y UST yield decreased further, beating current minimum historical levels amid an epidemic threatening both supply and demand worldwide. Meanwhile, markets are increasing their expectations of additional interest cuts. Currently, the market expects a 25bps Fed interest cut in March (100% probability), even markets price 100% probability 50bps in April. In addition, expectations of a 10bps interest cut by April have increased (100% probability), while in March, the market weighs a 70% probability. Peripheral risk premia continue to widen, led by that of Italy, as the government announced EUR 3.6bn in additional injections in the economy.
- In FX, the U.S. dollar continued to lose strength** on the back of potential actions by the Fed to curtail the Covid-19 spillover effect. Meanwhile, the euro continued appreciating, while the EM were mixed, with Latam currencies and oil linked currencies depreciating slightly, as the CNY recovered some ground and appreciated marginally.
