We do not rule out a fall in the current account deficit on the previous quarter of 6.3 billion dollars (4Q09) and close to that of -2.6 billion dollars a year ago (1Q08).

The current account deficit is likely to post a fall for the first quarter of this year in line with the lower economic growth cycle in Mexico. The main elements in the balance of payments suggesting this conclusion are as follows: First, the trade deficit in 1Q09 was 1.9 billion dollars (up on the 1.6 billion dollars deficit posted a year earlier); however, a reduction of this deficit is probable as the year progresses due to the greater economic contraction in Mexico as compared with the U.S. Second, remittances in the first quarter of the year of 5.5 billion dollars represented an annual fall of 4.9%. Although far from positive, we were expecting a bigger fall in this item of 10%. Third, although the surplus in the tourist balance for 1Q09 fell only slightly compared with the figure for a year earlier (2.0 billion dollars), the forecasts are for a severe reduction for the rest of the year, given the health emergency in the second quarter.

Fourth, capital expenses (mainly interest) may register an upturn compared with the average of the two previous quarters (-4.2 billion dollars) due to forecast amortizations: the private sector alone made payments of 7.7 billion dollars, 28% of total obligations for the year. (This includes both capital and interest, so it is an estimate of the balance of capital income in the current account). This balance remains the main source of uncertainty and may register pressures for greater outgoings in the future.

To sum up, we consider that the pressure affecting the current account at the start of the year do not, at present, represent a risk for financing the economy.
