Bogotá, November 25th 2009

- 1. Selected preliminary ideas**
- 2. What does stronger growth in China mean for Latam?**
- 3. BBVA global economic forecasts**

Appendix: BBVA in Asia and group performance

1. Selected preliminary ideas

- The impact of China's higher growth in Latam is transmitted by increased trade flows, rising commodity and domestic asset prices. Ultimately, the bilateral investment flows should also increase rapidly under this scenario
- In terms of trade, there is evidence of more complementarities than of direct competition. China should leverage on Latam's geographical situation and market access as an export platform to the rest of the region and EU markets
- The internationalization of the RMB currency for cross-border transactions would eventually facilitate trade flows with Latam but also increased investment flows
- Combined with China's capital account liberalization (likely to be gradual and asymmetric) and the ample domestic liquidity, these factors call for more Chinese portfolio investment overseas: QDII scheme, RMB settlement, RMB swap lines, etc.
- China has ample potential to become a relevant source of overseas investment following the historical experience of its peers
- Looking ahead, not only China but the rest of Emerging Asia has the potential too!

- 1. Selected preliminary ideas**
- 2. What does stronger growth in China mean for Latam?**
- 3. BBVA global economic forecasts**

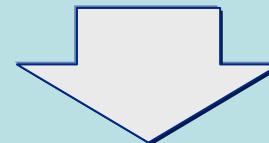

Appendix: BBVA in Asia and group performance

China's direct impact on Latam's growth still looks relatively limited, but there are three main potential transmission channels:

a. Bilateral trade

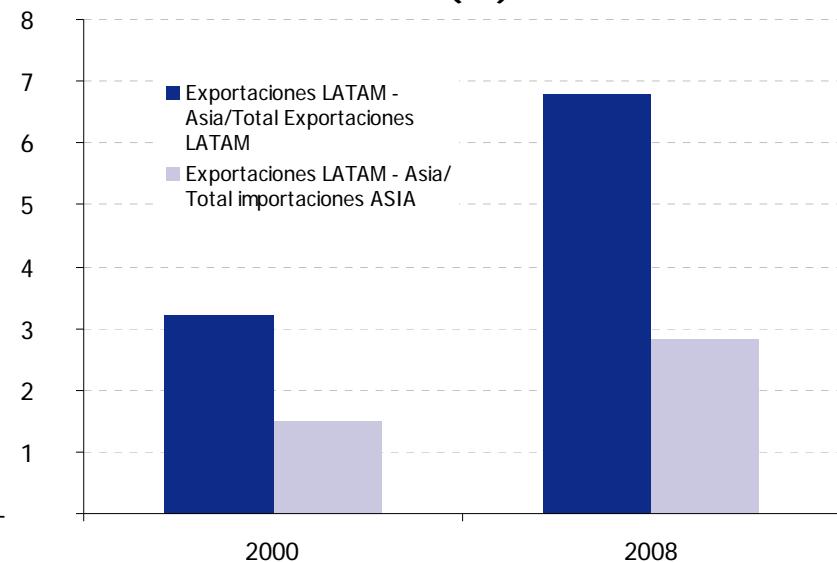

b. Commodity prices

c. Asset prices

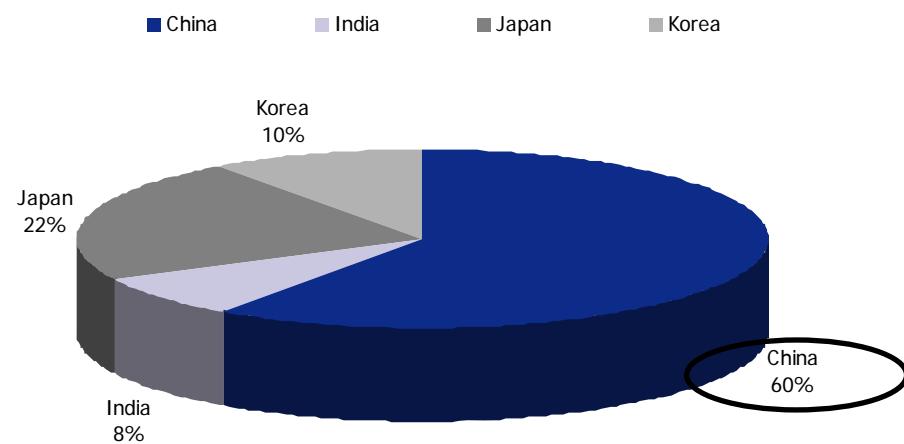

Increasing bilateral direct and capital investment

Peso de Exportaciones de América Latina a Asia (%)

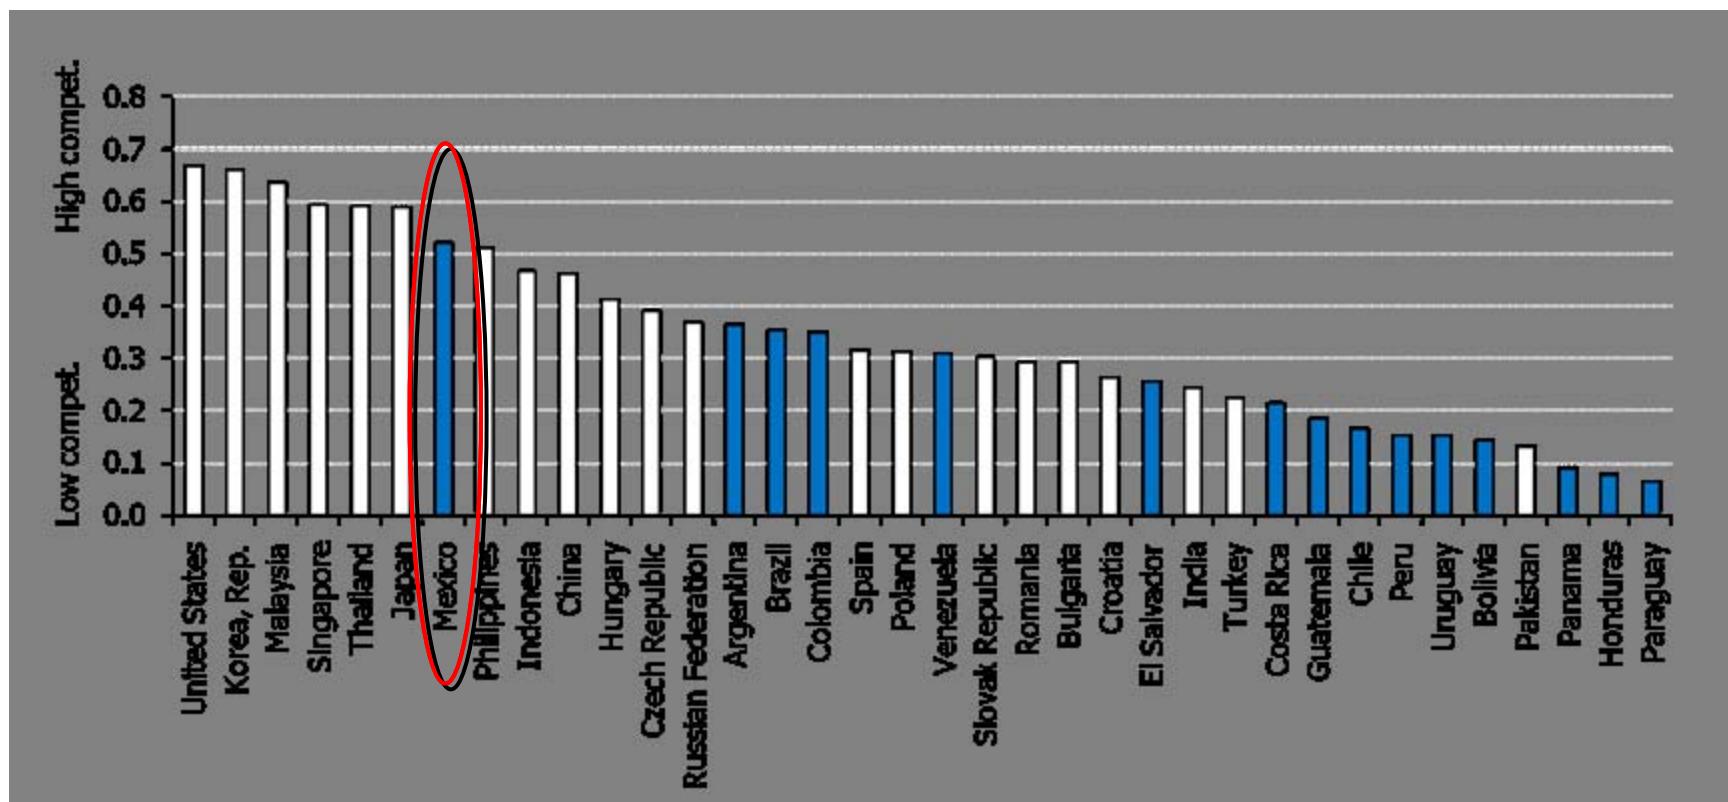

**Exports from Latam to Asia by country
2008**

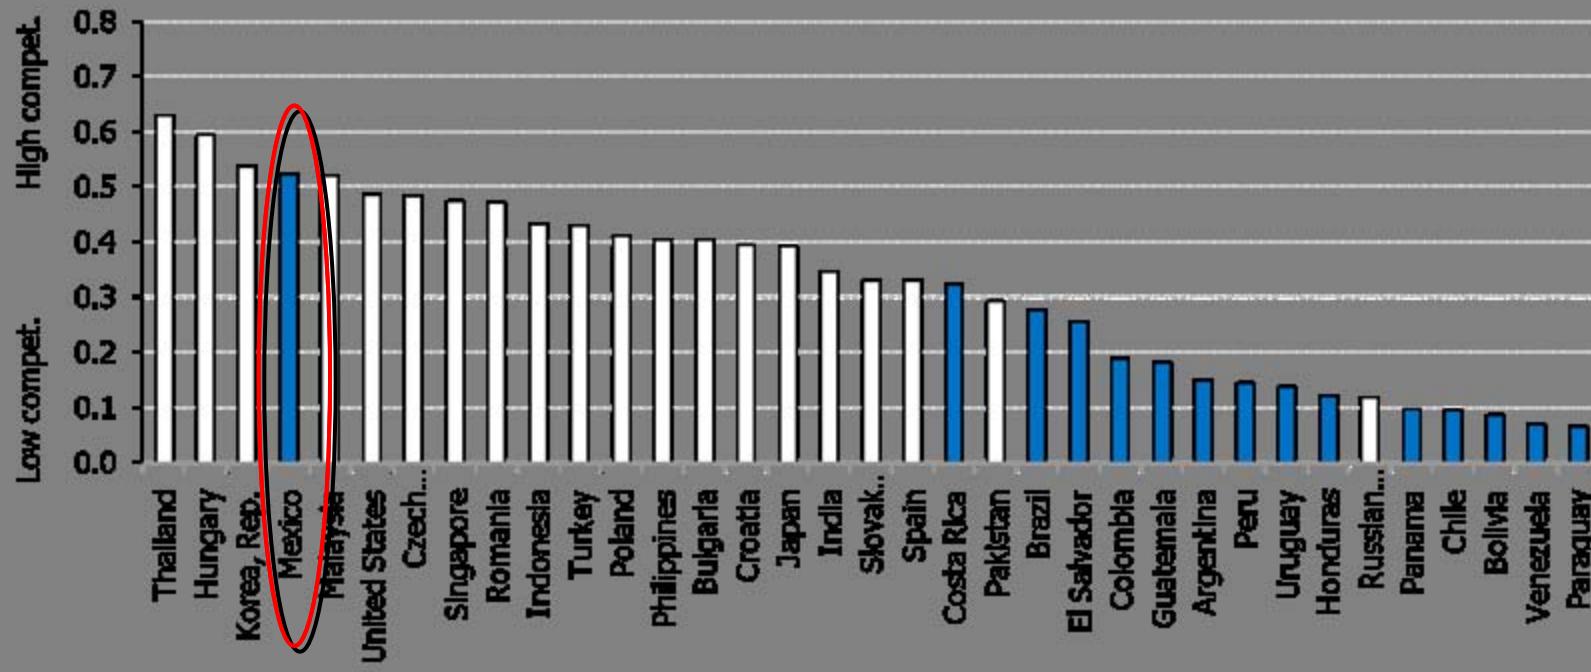

Latam: Argentina, Brasil, Colombia, Mexico, Peru y Venezuela. Asia: China, India, Japón y Corea.
