

# Global Weekly Flash

## Some profit-taking on disappointing data from China

There was a lack of event-driven news during this week. The risk-on mood in financial markets continued but there was some profit-taking driven by the disappointing data from China and lingering concerns in the Eurozone. Our BBVA Financial stress index has decreased by 29% its peak reached last June mainly due to a more flexible approach from the ECB, a sense of urgency from European authorities and better-than-expected US payroll figures for July. Yet, the rally in 2Y Spanish and Italian yields on ECB's pledge to reduce short-term borrowing costs came to a halt at the end of this week.

- Unlike in contrast with past episodes, Eurozone leaders and politicians are showing certain degree of alignment with the ECB proposal for tackling the European debt crisis. Last week, the ECB announced that they may intervene in debt markets but only after EU Member States facing high risk premium request aid from the EFSF/ESM to intervene in the primary bond market. Yet, up to today, none of the European peripheral countries have announced their intention to request the EFSF/ESM financial assistance, but some remarks seem to indicate that there is no clear opposition to the request.
- Expectations for the ECB intervention in the short end of the Spanish and Italian yield curves have fueled bond purchases in this part of the curve. In this regard, the 2Y Spanish yield fell by 93bps to 3.7% along the week, while the Italian 2Y decreased by 54.6bps to 3.16%. Yet, flows toward the short end of the yield curve have diminished somewhat at the end of the week. Additionally, the demand in the long end of the Spanish and Italian curves was more moderate than in the short end. As a result, the positive slope between the 10Y and 2Y Spanish yield has intensified significantly from 175bps to 305bps, which is well above of the German 10Y-2Y yield slope (150bps). This confirms that the subdued appetite for the long end of the Spanish curve.
- During the week, Spain fixed income funds registered inflows encouraged by Mr. Draghi's pledge to buy bonds. However, investment flows towards the German fixed income market have not shown any sign of recovery (outflows since early June) whereas there are steady flows to fixed income funds in the US, the UK and other developed countries such as Sweden (ie, with a currency not linked to the euro).
- The rating agency DBRS downgraded Spain from A (high) Under Review Negative to A (low) with a Negative trend and the Italian rating was downgraded from A(high) to A with a negative trend. Despite these downgrades, the actions have no effects on the ECB liquidity policy toward Spanish and Italian collateral, as the rating remains in the single-A grade.
- In the US, latest payroll figures increased the probability for a wait and see stance of the FED in September. Nevertheless, the intervention of the FED president, Mr. Bernanke, at Jackson Hole economic policy symposium will bring some clue about the likelihood of further QE.
- Elsewhere in China, investors are waiting for actions to stimulate growth. Recent economic data provides space for further policy easing, including 150bps of further cuts in the RRR, up to two more interest rate cuts, and a step-up in public investment projects.
- The 2-month rally in commodities prices (briefly?) paused this week after investors took profits on commodities assets due to weaker-than-expected Chinese export data. Since June 2012 the CRB Food index has rallied by 12% while the crude oil prices have surged by 20-27% in the same period. However, industrial raw materials have increased only by 3% since late July when they reversed their negative trend. Geopolitical issues and a drought in the US provide some support to crude oil and crop prices despite the global slowdown.

- In China weak economic data increased the possibility of further monetary policy support. In the Eurozone, data for Q2-12 points to a mild contraction in GDP growth over the previous quarter

- In the eurozone, data available for Q2 points to a mild contraction in GDP growth. Both European Commission and PMI confidence indicators deteriorated sharply in April and May, falling back to end-2011 levels, when GDP contracted 0.3% q/q, although June's readings indicate that the pace of decline eased towards the end of the second quarter. Our short-term model (MICA) estimates a contraction in GDP of around 0.2% q/q in Q2-2012, although our macroeconomic outlook points to a slightly larger contraction, of 0.3% q/q, as do the rest of our models. This is because the indicators used in the short-term model could be factoring in a certain delay in the fiscal adjustment and the spike in financial stress. Across countries, short-term indicators for Germany and France suggest that GDP could have slowed with respect Q1, by 0% q/q and -0.1%, respectively, while the periphery is expected to remain in negative territory. Once again, uncertainty about the resolution of the European crisis remains very high, and thus downside risks continue to be biased downwards. See our latest [Europe Economic Outlook](#).
- In China, inflation and activity indicators were on the weak side, indicating that the hoped-for pickup in growth momentum has not yet occurred. China's trade growth plunged sharply in July in a new sign of global economic weakness. Exports rose just 1% over a year earlier, down from June's 11.3 %. Import growth fell to 4.7% from the previous month's 6.3%. Moreover lending by Chinese banks fell sharply in July. In addition growth of July Industrial production and retail sales were lower than-expected at 9.2% y/y and 13.1% y/y respectively (consensus: 9.7% and 13.5%, respectively), while other indicators were closer in line with expectations, including fixed asset investment (20.4% vs. consensus: 20.6%) and CPI inflation (1.8% vs. consensus: 1.7%). We believe that inflation has now bottomed out, and should gradually pick up to 2-3% during the remainder of the year, still below the authorities' 4% tolerance level. Together with weak growth momentum, this should provide space for further policy easing, including 150bps of further cuts in the RRR, up to two more interest rate cuts, and a step-up in public investment projects. These policies should sustain GDP growth in line with our full-year 7.8% projection, as detailed in our just-released [Asia Outlook](#).
- In the US, Q2 nonfarm productivity rise more than expected, +1.6%, versus consensus expectation of 1.4%. Unit labor cost rise (ULC) more than expected +1.7% (versus +0.3% expected), and Q1 was revised up significantly. All in all, year on year growth of ULC remains weak.
- Regarding Latam, this week some countries released inflation data. In Brazil inflation increased to 5.2% y/y in July from 4.9% y/y in June. This was the first time inflation moved up since Sep/2011 when it reached 7.3% y/y. We expect domestic economic recovery, less supportive base effects and more pressures from food prices to prevent inflation from declining significantly in the remainder of the year. In Mexico, Inflation rose again in July due to supply shocks and depreciation of the peso. July inflation increased 0.56% m/m, accelerating year on year from 4.3% in June to 4.4%. Core inflation rose 0.31% m/m and accelerated annual 3.5% y/y in the previous month to 3.6% in July. In Colombia with monthly inflation below expectations, -0.02% m/m (0.07% consensus and BBVA Research), annual inflation in July reached 3.03%, reaching the mid-point of the inflation target. We forecast inflation to remain near the mid-point of the inflation target during the second part of the year, providing additional space for the central bank to continue easing the monetary policy stance. In Chile, monthly inflation was 0% in July; in a yearly basis, inflation rate fell to 2.5%, while core inflation measures recorded annual increases of 2.4% and 2.3%. On activity, the Monthly Economic Activity Index in Chile grew 6.2% y/y in June, + 0.4% m/m, well above both our and market expectations and largely explained by the performance of retail sales and other services, together with the favourable behaviour of electricity production. By July, we forecast activity to grow by 4.9% y/y.

**Next week:** Investor will keep attention on GDP figures for 2Q in the EZ and Japan, while in the US retail sales and industrial production for July will be published.

# Calendar: Indicators

## Eurozone: HICP inflation (Jul, Aug 16th)

Forecast: 2.4% y/y

Consensus: 2.4% y/y

Previous: 2.4% y/y

We expect headline inflation to be confirmed at 2.4% y/y in July, remaining unchanged from June. With regards inflation of other components, our forecast suggests that they should remain broadly unchanged, resulting in the stabilization of core inflation at 1.8% y/y. We expect a slowing inflation for the Eurozone as a whole over the coming months before ending the year slightly below the ECB's target of 2% y/y. For 2012 we have lowered our forecast for average annual inflation by 0.1pp to 2.3%, largely due to lower oil prices. This contrasts with our estimate from three months ago of rising prices. Given weak domestic demand, core inflation will also continue to ease over the coming months to end the year at around 1.7% y/y, resulting in an annual average of 1.8%.

## Eurozone: Flash GDP (Q2-12, Aug 14th)

Forecast: -0.3% q/q

Consensus: -0.2% q/q

Previous: 0.0% q/q

Data available for Q2-12 points to a mild contraction in GDP growth over the previous quarter. Both European Commission and PMI confidence indicators deteriorated sharply in April and May, falling back to end-2011 levels, when GDP contracted 0.3% q/q, although June's readings indicate that the pace of decline eased towards the end of the second quarter. Our short-term model (MICA) estimates a contraction in GDP of around 0.2% q/q in Q2-2012, although our macroeconomic outlook points to a slightly larger contraction, of 0.3% q/q, as do the rest of our models. This is because the indicators used in the short-term model could be factoring in a certain delay in the fiscal adjustment and the spike in financial stress. Across countries, short-term indicators for Germany and France suggest that GDP could have slowed with respect Q1 (by -0.1% q/q in France and 0% in Germany), while the periphery is expected to remain in the red. Once again, uncertainty about the resolution of the European crisis remains very high, and thus downside risks continue to be biased downwards.

## US: Retail Sales, Ex Auto (July, August 14th)

Forecast: 0.2%, 0.3% m/m

Consensus: 0.4%, 0.4% m/m

Previous: -0.5%, -0.4% m/m

Total retail sales are likely to improve only slightly in July after being dragged down by falling gasoline and auto sales in June. Gas prices have rebounded somewhat and are therefore less likely to drag down nominal retail sales in July. However, a drop in unit auto sales for the month could weigh on the total. In addition, weekly retail sales surveys were volatile throughout July and suggest only modest monthly improvement. Ultimately, consumer confidence remains weak and recent gains in personal income have yet to boost consumer spending.

## US: Consumer Price Index, Core (July, August 15th)

Forecast: 0.2%, 0.2% m/m

Consensus: 0.2%, 0.2% m/m

Previous: 0.0%, 0.2% m/m

Inflation concerns have been minimal in recent months as a result of declining energy prices, yet core inflation continues to rise. Crude oil prices in July have only partially recovered from previous declines but should put some upward pressure on headline inflation for the month. While food prices are not having an immediate impact on inflation, we expect to see added pressure from this component later in the year. Excluding food and energy, core inflation has been steady near 0.2% for four consecutive months, with most of the pressure coming from shelter and medical care services.

## Japan: GDP growth (Q2-12, August 13th)

Forecast: 0.8% q/q saar

Consensus: 2.0% q/q saar

Previous: 4.7% q/q saar

Japan's economy is expected to have decelerated in the second quarter after expanding 4.7% q/q saar in Q1. Recent activity indicators, especially industrial production and exports point to a slowdown from global headwinds that are suppressing exports. At the same time, post-quake reconstruction as well as rising domestic auto sales due to government subsidies should sustain growth in the coming quarters. We expect full-year growth to reach 2.4% in 2012, as the economy bounces back from last year's disruptions from the earthquake and tsunami, with risks on the downside due to global uncertainties.

No part of this report may be copied, conveyed, distributed or furnished to any person or entity in any country (or persons or entities in the same) in which its distribution is prohibited by law. Failure to comply with these restrictions may breach the laws of the relevant jurisdiction.

In the United Kingdom, this document is directed only at persons who (i) have professional experience in matters relating to investments falling within article 19(5) of the financial services and markets act 2000 (financial promotion) order 2005 (as amended, the "financial promotion order"), (ii) are persons falling within article 49(2) (a) to (d) ("high net worth companies, unincorporated associations, etc.") Of the financial promotion order, or (iii) are persons to whom an invitation or inducement to engage in investment activity (within the meaning of section 21 of the financial services and markets act 2000) may otherwise lawfully be communicated (all such persons together being referred to as "relevant persons"). This document is directed only at relevant persons and must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is available only to relevant persons and will be engaged in only with relevant persons. The remuneration system concerning the analyst/s author/s of this report is based on multiple criteria, including the revenues obtained by BBVA and, indirectly, the results of BBVA Group in the fiscal year, which, in turn, include the results generated by the investment banking business; nevertheless, they do not receive any remuneration based on revenues from any specific transaction in investment banking.

BBVA is not a member of the FINRA and is not subject to the rules of disclosure affecting such members.

**"BBVA is subject to the BBVA Group Code of Conduct for Security Market Operations which, among other regulations, includes rules to prevent and avoid conflicts of interests with the ratings given, including information barriers. The BBVA Group Code of Conduct for Security Market Operations is available for reference at the following web site: [www.bbva.com](http://www.bbva.com) / Corporate Governance".**

**BBVA is a bank supervised by the Bank of Spain and by Spain's Stock Exchange Commission (CNMV), registered with the Bank of Spain with number 0182.**
