#### Asia

On a day of further downward equity pressures in the region, the Fourth BRICS Summit meeting wrapped up today in New Delhi. The Declaration expressed "concern over the current global economic situation." In particular, leaders from Brazil, Russia, India, China, and South Africa lamented the uncertainty to the global outlook from ongoing sovereign debt problems and volatility in capital flows from the "aggressive policy actions taken by central banks to stabilize their domestic economies." The latter is a reminder of the challenges posed to Asian and other emerging market central banks, and asset price pressures that may reemerge from quantitative easing and the low global interest rate environment.

#### Hong Kong's Chief Executive elect on property prices and the currency peg

The local press in Hong Kong today reported on an interview with CY Leung, the new Chief Executive elect. According to the reports, Leung emphasized his plans to pursue measures to contain property prices, and ensure housing affordability. In addition to increasing land supply, Leung stressed the construction of affordable housing. These policies are in line with statements Leung made during the campaign. On the issue of Hong Kong's currency peg, Leung stressed that he has no intention of changing the existing linked exchange rate regime, Leung will take office on July 1, and in the meantime he faces the challenge of building ties with the local business community, who tended to favor his main rival during the campaign period.

#### Vietnam's first quarter GDP slows down noticeably

Vietnam's first quarter 2012 GDP slowed to 4.0% y/y from 6.1% y/y the previous quarter and 5.9% y/y for the whole of 2011. The outturn marked the slowest quarterly growth rate since early 2009. The slowdown will pose challenges for Vietnam in meeting the government's 6% growth target for this year. Earlier this month the central bank began easing monetary policy by cutting interest rates, and today's outturn makes further easing more likely.

#### Briefly noted:

- Korea posted a smaller-than-expected current account surplus of US\$640 million in February after a deficit of US\$970 million in January. While we expect the surplus to rebound during the course of the year, in the near term the weaker outturn could weigh on the Korean won.
- South Korean February industrial production will be released tomorrow, along with Japan's March inflation and unemployment data.

# Indicator of the Week

#### China: PMI for March (April 1)

Forecast: 51.0 Consensus: 50.6 Prior: 51.0

The official PMI outturn will be closely watched following recent indications of a further slowing in growth momentum. The private sector flash PMI estimate came in weaker than expected on March 22, raising expectations of a decline in the forthcoming PMI outturn after 3 consecutive months of a pick-up. Although underlying growth momentum is weakening, we expect the official PMI to remain unchanged from the previous month due to a seasonal rebound from the Chinese New Year in January. A more significant set of indicators will be released in mid-April, including Q1 GDP, industrial production, retail sales, and investment.
