Korea's 2Q GDP growth falls short of estimates

Korea's second quarter GDP came in below expectations (2.4% y/y, consensus: 2.5% y/y, BBVA: 2.6% y/y) as weak investment spending and consumption weighed on growth. Sequentially, growth slowed to 0.4% q/q this quarter after 0.9% q/q in the first quarter. To address the ongoing slowdown, Korea has implemented a mix of fiscal and monetary measures in recent weeks. Looking ahead, weakening consumer confidence and expectations of a sluggish global environment suggest that growth will remain under pressure in the coming months. Authorities recently lowered their growth outlook for 2012 to 3.0% (BBVA: 2.9%), below Korea's potential, and given expectations that inflation will likely remain on the low end of policymakers' 2%-4% target there is room for further easing to support growth.

The Philippines surprises with a rate cut

The Philippines became the latest country in Asia to ease monetary policy, with a surprise 25bp interest rate cut today to a record low of 3.75%. According to the central bank, expectations that inflation will remain towards the bottom of the central bank's 3%-5% target range along with weak prospects for global economic activity prompted a "pre-emptive" rate cut. The Philippines' decision follows recent policy easing in China and Korea as Asia's policymakers have increased support for their economies due to the sluggish global environment. We had not anticipated rate cuts during the remainder of the year, but with inflation expected to remain muted in the coming months further rate cuts remain a possibility.

China latest fiscal support measures unveiled in a local spending plan

According to the state's official news agency Xinhua, yesterday the State Council approved a plan to promote the development of six of the country's central provinces. Although the specific support measures are still unknown, one of the six provinces, Hunan, will reportedly unveil an 829 billion yuan (US\$130 billion, or 1.7% of GDP) investment plan containing 195 projects, including investments on airport and subway lines. This scaling up of fiscal support is in line with our projections of economic growth momentum gradually improving in the second half of 2012.

India plans to provide tax break for equity investments

Senior officials from India's finance ministry have stated that India plans to launch a program as early as next week to give tax breaks to domestic investors who invest as much as 50,000 rupees (US\$890) in equities each year. The move is aimed at boosting equity participation and liquidity as well as reducing overall market volatility. Retail investors have withdrawn around 35 bn rupees from domestic equities markets in the first six months of 2012.

Briefly noted:

• Singapore's industrial production in June surprised to the upside (7.6% y/y, consensus: 2.8% y/y) due to a surge in pharmaceuticals production. Despite the positive outturn, risks remain tilted to the downside, with the Monetary Authority of Singapore warning in its annual report yesterday that its 1%-3% growth target for this year may be at risk given the high degree of uncertainty over the external environment.
