

Can the Philippines become a BBVA EAGLE?

The Asian Banker: Philippines International Banking Convention

Manila, September 2012

What is BBVA EAGLEs?

- Concept introduced by BBVA Research 15
 months ago to provide investors with a more
 rigorous and dynamic approach to selecting key
 Emerging Markets (EM)
 - Why rigorous
 - Why dynamic

Why are the BBVA EAGLEs relevant?

- Continuous follow up of key EMs is needed because of rapid structural changes in global economy
- Investors' need to review their decisions often (hold to maturity strategy at any cost is not realistic)
- EMs should be fully aware of their relative relevance as recipients of investment but also as new investors

Outline

- 1. Life beyond BRICs
- 2. Our own group of key emerging markets: BBVA EAGLES
- 3. The century of Asia
- 4. The Philippines in the EAGLEs world
- 5. Key policy conclusions

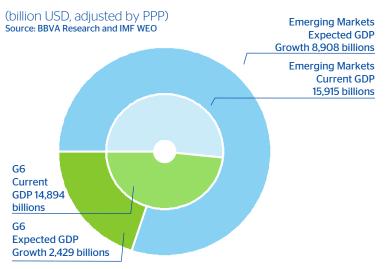

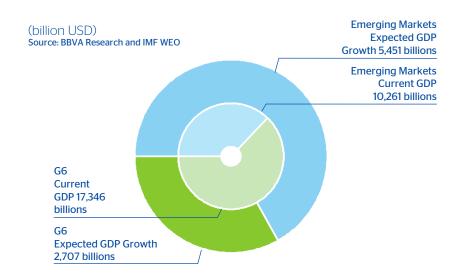

Life beyond BRICs in Emerging Markets (EM)

- Already large size of the pie
 - Combined size of EM (ex BRICs) bigger than the G6 (G7 ex US)
 - Close to 40% in USD terms
- Much larger if we look at future size
 - Contribution to global growth in next 10 years 4 times larger
 - (3 times in USD terms)

45 EM without BRICs vs G6: current economic size and incremental GDP 2011-2021

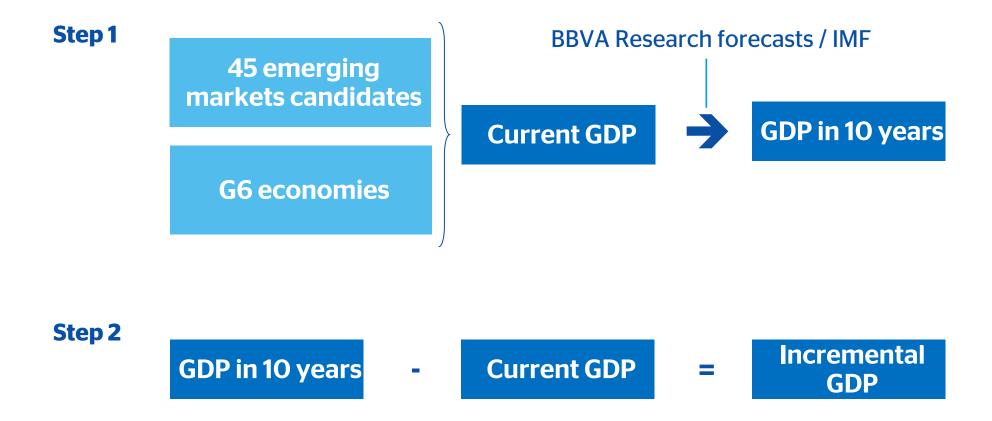

Outline

- 1. Life beyond BRICs
- 2. Our group of key emerging markets: BBVA EAGLES
- 3. The century of Asia
- 4. The Philippines in the EAGLE world
- 5. Key policy conclusions

Methodology: a mix of Size and Growth

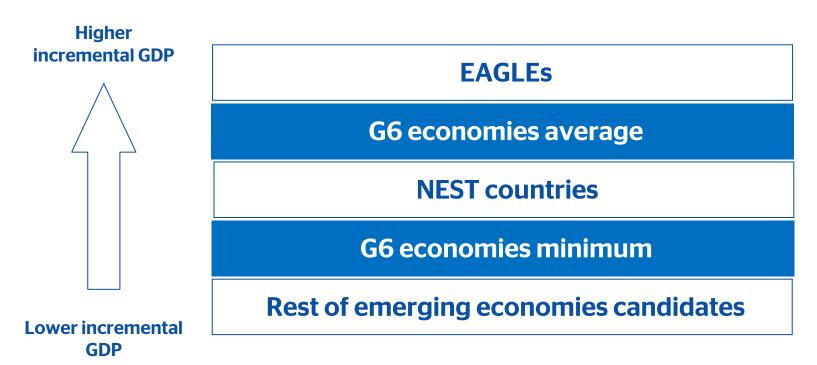

Methodology: a mix of Size and Growth

Step 3

Ordering and selection criteria according to incremental GDP

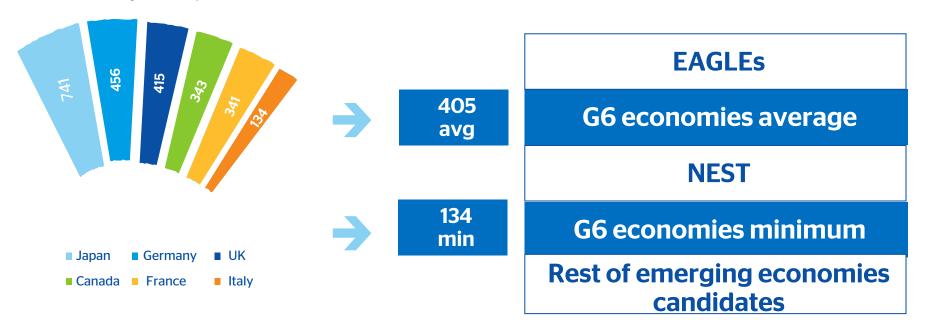

How to determine the number of countries: The cut-off

Incremental GDP of G6 economies (2011-2021 GDP change)

(billion USD, adjusted by PPP)

- EAGLEs: Any country with an incremental growth > USD 405 billion
- NEST: Countries with incremental growth higher than USD 134 billion but below USD 405 billion

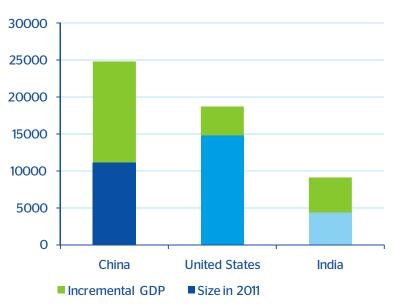

China & India the largest EAGLEs

- China is playing in a league of its own
- India would have a larger contribution to GDP growth than the US

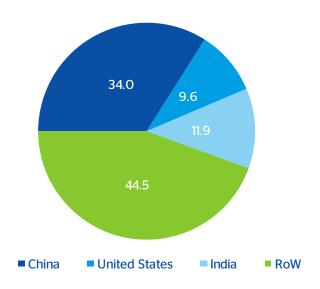

Global Leaders in the next 10 years: GDP adjusted by PPP (billion USD)

Source: BBVA Research and IMF WEO

Global Leaders in the next 10 years: contribution to World economic growth 2011-2021 (%)

Source: BBVA Research and IMF WEO

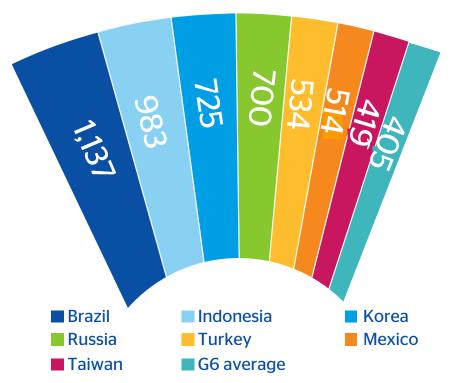

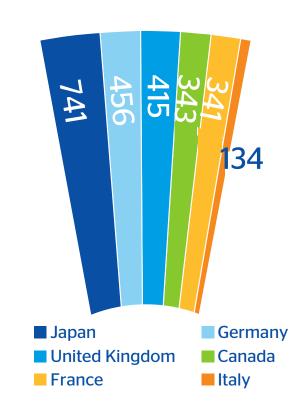

Other EAGLEs are also global players

BBVA EAGLEs: China, India, Brazil, Indonesia, Korea, Russia, Mexico, Turkey and Taiwan

EAGLEs (excluding China and India) vs G6: Incremental GDP 2011-2021 (billion USD, adjusted by PPP)

Source: BBVA Research and IMF WEO

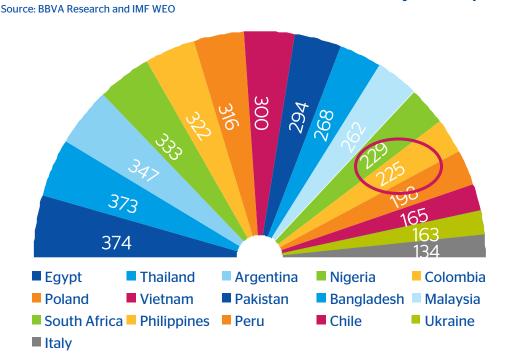

The Nest of the EAGLEs and the Philippines

- The Philippines to contribute to global growth more than Italy (the smallest G6)
- Also expected to be larger than Peru, Chile or Ukraine

Nest: Incremental GDP 2011-2021 (billion USD, adjusted by PPP)

Outline

- 1. Life beyond the BRICs
- 2. Our group of key emerging markets: BBVA EAGLES
- 3. The century of Asia
- 4. The Philippines in the EAGLE world
- 5. Key policy conclusions

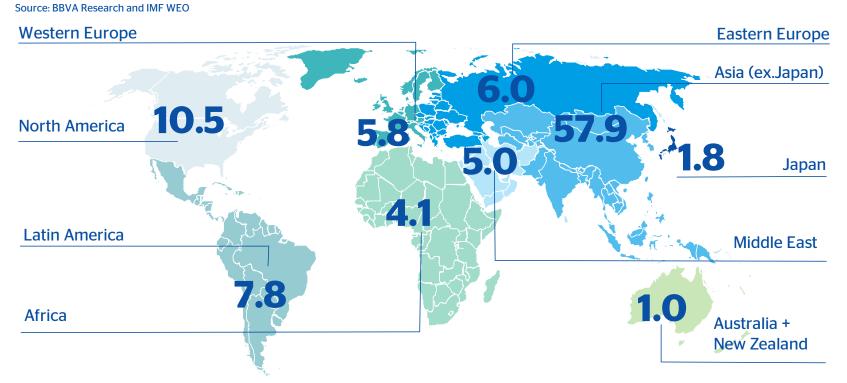

New global economic order Asian, especially Chinese

- Emerging Asian economies to contribute close to 58% to global growth in next 10 years
- China largest contributor with 34% of global growth followed at distance by India (12%)
- Europe falls far behind but also North America

Outline

The world is changing: deep knowledge about key emerging markets key

Our own group of key emerging markets: BBVA EAGLES

The century of Asia

The Philippines in the EAGLE world

Key policy conclusions

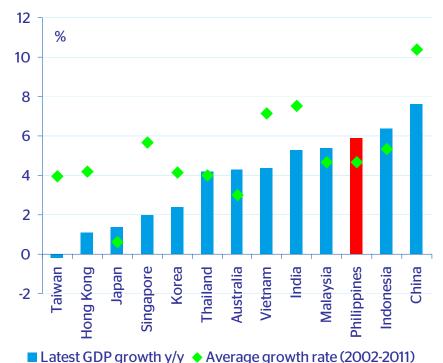

The Philippines: A recent star among starts

- The Philippines' economic performance over the past ten years has been standard among Asia
- However, growth momentum is building recently and future prospects look favorable

The Philippines' growth momentum has been increasing Source: CEIC and BBVA Research

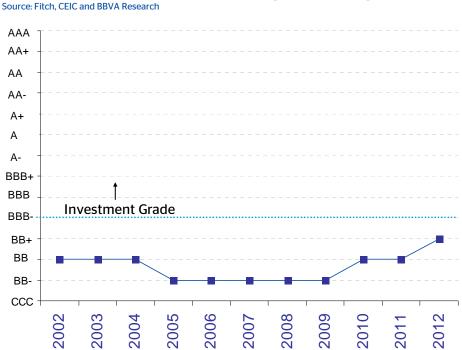

Achieving investment grade is of the essence

- The Philippines holds its highest ratings in over a decade: now just one notch away from IG
- Being investment grade will help attract additional investment and lower the cost of borrowing in a more structural way

An improving economy has left the Philippines one notch away from an investment grade rating

Consumption king but investment more relevant

- Domestic demand has supported the Philippines' strong rebound from the financial crisis
- Consumption very resilient but investment growth playing a more important role

Robust domestic demand, investment have been fueling the surge in growth

Source: CEIC and BBVA Research 12 GDP growth, % y/y 10 5.2 7.6 8 6.6 4.2 3.9 6 4 1.1 2 0 -2 -4 2007 2010 2006 2008 2009 2011 **Government Consumption Private Consumption** GFCF Net exports

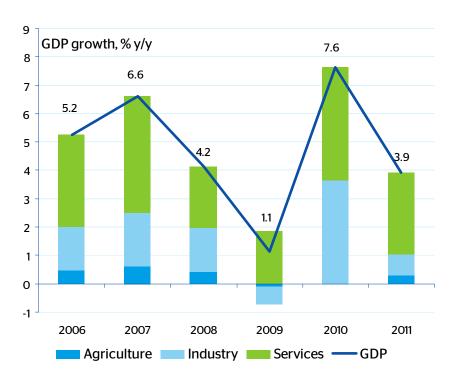

Service sector key with increasing importance of tourism

- The service sector has been a reliable contributor to economic growth
- Within the service sector, tourism has emerged as a key growth area

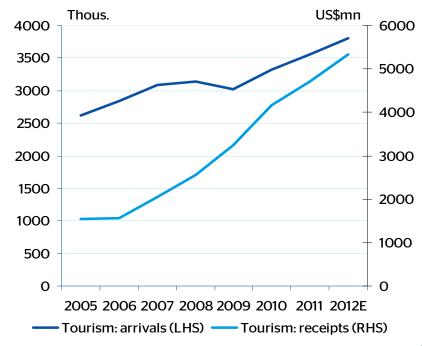

Service sector growth is being driven by trade, real estate, and financial services...

Source: CEIC and BBVA Research

...while rising tourism is also boosting the service sector

Source: CEIC and BBVA Research

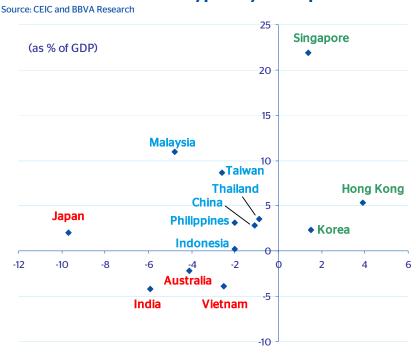

Well deserved rating through improved fundamentals

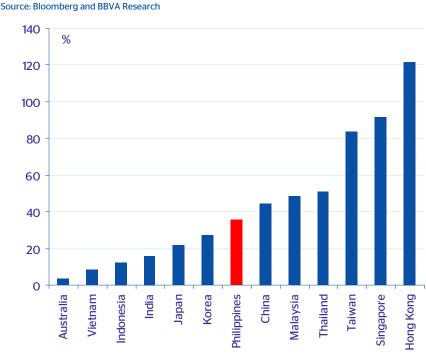

- The government has adequately managed its deficit spending and is in line with regional peers
- Foreign reserves have grown and sufficiently cover near-term requirements

The Philippines public deficit is well managed, and the current account is typically in surplus

Fiscal Surplus/Deficit (x-axis)

There are adequate reserves to cover short-term expenditures

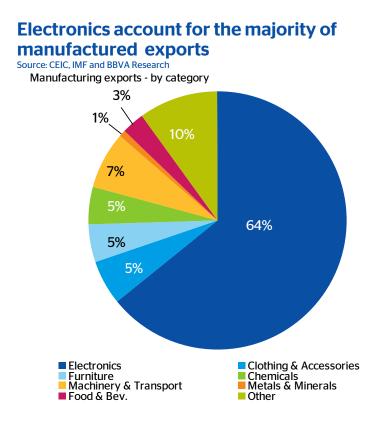

Foreign Reserves/GDP

Export strategy is clearly electronics

- Exports focus on electronics, with typical export share between 60-75%
- Agri-business is a growing focus for exporters as well

How can the Philippines fly like an EAGLE?

- Continue to grow its middle class:
 - Policies to provide further boost to private consumption
 - Avoid poverty trap (better income distribution)
 - Focus on value-added businesses, which will create more high-paying jobs
 - Education, health policies, social protection
 - Retention of human capital
- Increasing productivity through upgraded infrastructure
- Financial inclusion key

Balance of Risks: The Philippines vs EAGLEs

	Growth model	External demand	Macro imbalances	Institutional	Social Risk	Inclusive Growth
China	Low labor force growth & weak TFP fundamentals			Shortages on the public side	Food dependency	Inequality
India	Weak TFP fundamentals		Twin deficits & high public debt	Shortages on private and public sectors	Food dep. / high unemployment/ low secondary education enrolment	Poverty
Brazil	Low quality infrastructures	China and commodities dependency	Small twin deficits and high public debt	Investment climate		Inequality
Indonesia	Weak TFP fundamentals	Reliance on commodities		Shortages on private and public sectors	Food dependency . low secondary educati enrolment	on Poverty
Korea		China dependency				
Russia	Decline in labor force / low quality infrastructures	/ Low trade partners' growth / reliance on commodities		Shortages on private and public sectors	Food dependency	Poverty
Turkey		Low trade partners' growth	Current account deficit			
Mexico	Weak TFP fundamentals	Low trade partners' growth				Inequality & poverty
Taiwan	Low labor force growth	China dependency / very open				
Philippines	Low quality infrastructure			Shortages on private and public sectors	High dependency on remittances	Poverty

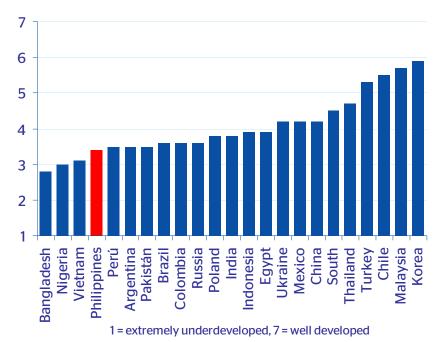

Next drivers of growth: Infrastructure and demographic dividend

- Further upgrading infrastructure will be necessary in order to make important advances
- "Demographic bonus" in the coming years to support growth but potential source of social unrest (55% of the population is younger than 25 years of age)

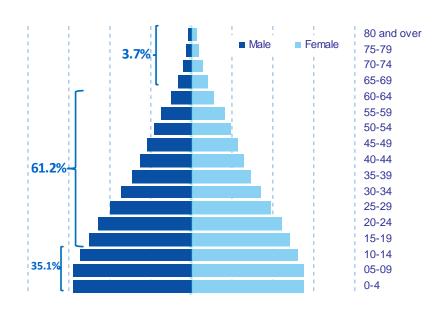

Improving the quality of the Philippines' infrastructure* would provide positive spillovers...

Source: World Economic Forum and BBVA Research

...and future growth is likely to be supported by a favorable 'demographic dividend'

Source: EIU and BBVA Research

More efforts to improve total factor productivity

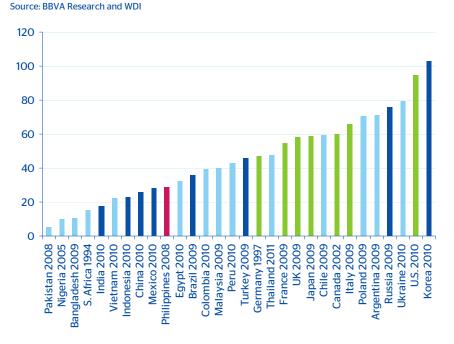

- Efforts to transform economy into an electronic manufacture hub not enough to foster productivity growth.
- Human capital (retention) key

GPP pc USD PPP vs GII score 2012

Source: BBVA Research, IMF, UN Pop and GII 2012

65 UK 60 Korea 55 France 50 Malaysia China GII score Italy Poland Brazil Colombia 35 Argentina South Africa Thailand Mexico Ukraine 5.000 10.000 15.000 20.000 25.000 30.000 35.000 40.000 45.000 **GDP pc USD PPP**

Outline

The world is changing: deep knowledge about key emerging markets key

Our own group of key emerging markets: BBVA EAGLES

The century of Asia

The Philippines in the EAGLE world

Key policy conclusions

Key policy conclusions

Change in centre and periphery in the global economy

• The **EAGLEs** and the Nest are expected to contribute more than 2/3 to global growth in next 10 years (G7 contribution would be around 16 percent)

Key emerging markets going beyond the BRICs

• We should start focusing on other emerging markets (not only the BRICs). Our EAGLEs and NEST groups offers regular analysis of a set of key countries based on a dynamic analysis and clear benchmarking

The Philippines: Opportunities ahead

The Philippines is in our Nest and has done very well lately, specially on the macro and country side.

These policies need to be maintained notwithstanding the current global uncertainty: achieving investment grade is of the essence

More to be done to find new sources of growth: Increasing total factor productivity through better human capital which can be retained in the country
