

Daily Flash

Asia

Strong data releases in China (see below) failed to reverse negative sentiment across the region as spillovers from the US continued to weigh on markets. The Nikkei and Hang Seng led today's equity losses, with each down by -0.9%. Trade data in China will be released tomorrow (see Weekly Indicator below), along with credit aggregates next week. We will also be watching for Q3 GDP outturns in Hong Kong, Japan, and Malaysia in the week ahead.

China's October data point to improving growth momentum

Today's release of October activity indicators provides further evidence of a pickup in growth (click [here](#) for further details). Fixed asset investment, retail sales, and industrial production all rose from the previous month, by slightly more than expected. Property sales and real estate investment also picked up in October. The data come after an encouraging set of indicators in September, and last week's release of the official PMI, which rose back to above the 50 threshold for the first time in 3 months. At the same time, October CPI inflation released today came in below expectations at 1.7% y/y (BBVA: 2.0%; consensus: 1.9%) on moderating food prices. We see room for further policy easing in the coming months, especially after the ongoing leadership transition is completed.

Korea holds interest rates, as expected; no further cuts anticipated this year

The Bank of Korea kept interest rates on hold at 2.75%, as expected, after cutting by 25bps last month. In its statement, the BoK highlighted that despite weak growth, "exports appear to be emerging from their downtrend and consumption and investment have turned around." With inflation running at the lower end of the 2-4% target range, there is room for further cuts if needed; nevertheless, we expect the BoK to remain on hold (especially with the upcoming Presidential election scheduled in December), unless there is a further deterioration in the external environment.

Malaysia's exports surprisingly rise in September

Malaysia's exports rose by 2.6% y/y in September (consensus: -2.9% y/y) recovering from two months of declines (August: -4.5% y/y). A rise in electronic and petroleum products boosted September's outturn, while by region, the rise in exports was mainly due to improving demand from Asia and the US. Malaysia's industrial production for September, released yesterday, also surprised to the upside; both outturns support the central bank's decision yesterday to refrain from cutting interest rates on 'the sustained expansion in domestic activity.'

Briefly noted:

- **Indonesia's Q3 balance of payments of data showed a narrowing of the current account deficit** to \$5.3 billion from \$7.7bn in Q2 on slowing import growth. The emergence of a current account deficit this year has led to worries of overheating, and has been a factor for the weakness in the Indonesian rupiah, which has depreciated by 6.1% against the USD this year. Otherwise, the capital account recorded strong inflows in Q3, including FDI, resulting in an overall BoP surplus of \$0.8 billion.

Indicator of the Week

China: Exports for October (November 10)

Forecast: 10.0% y/y

Consensus: 10.0% y/y

Prior: 9.9% y/y

Following an upside surprise in September, exports for October are expected to register another good outturn in year-on-year terms. However, in contrast to last month, the strength of the projected outturn for October is due entirely to base effects, as exports dipped in the month a year ago. Looking ahead, exports will continue to face external headwinds, as evidenced at the twice-yearly Canton Export Fair which concluded a few days ago, in which new export orders declined by -13.7% y/y. Recent domestic indicators, however, are showing an improvement on stronger domestic demand; this is helping to offset the external weakness, and Q4 GDP growth is projected to strengthen. We expect policy easing to continue in the months ahead, once the leadership selection process now underway is completed.
